Education

2021 – 2025 **Ahmedabad University**

B.S. (Hons.) Computer Science

Relevant Coursework: **Statistics, Machine Learning, Probability and Stochastic Processes, Human Computer Interaction**

Projects

Unblocked Signup Drop-off and UX Friction points for Ownly food delivery app Project Link

- Mapped the full user journey across 7 touchpoints, found **6 conversion friction points**, and used ICE scoring to rank them. SSO onboarding came out on top at 8.0/10.
- Wrote a **full PRD** for the SSO fix with user stories, acceptance criteria, and success metrics tied to registration completion rate.
- Sketched wireframes for an “Explore First, Geofence Later” flow that lets users browse without GPS permissions, solving the dead-end that blocks new signups.
- Put together an **A/B test plan** with hypothesis, control/treatment split, and sample size to validate the fix before rolling it out.

Identified \$1.5M at Risk Revenue Using RFM Analysis for Olist Ecommerce website GitHub

- Wrote 10 SQL queries on 100K orders across 9 tables. RFM segmentation showed **25% of customers drive 48%** of revenue, while another 25% are at-risk with \$1.5M in recoverable value.
- Found that late deliveries drop review scores by **1.72 points** (4.29 to 2.57). Furniture and home categories had the highest late-delivery rates.
- Built a **Streamlit dashboard** with 4 tabs and live KPI cards, covering funnel analysis, revenue trends, payment behavior, and delivery performance.

Automated 40% of Invoice Exception Handling time for Accounts Payable teams Live Demo

- Built a detection engine for **7 invoice exception types** (amount mismatch, missing PO, duplicate, etc.) using deterministic rules. No AI guessing on what’s wrong.
- Integrated **DeepSeek LLM** to draft fix proposals from invoice context with confidence scores; validated every response with Zod before rendering.
- Designed a learning loop where approved fixes are saved as patterns and **auto-applied** to identical exceptions, removing human review on repeat cases.
- Shipped full-stack MVP with React, TypeScript, and Postgres on Vercel; end-to-end from detection to resolution in under **3 clicks**.

Experience

ML Instructor Intern — *NIELIT*

May 2025 – Jul 2025

- Taught Machine Learning to 40 students and achieved a project completion and passing rate of **100%**.
- Reduced debugging friction of students by designing Python notebooks and modular ML pipelines.

Skills

Product: Product Strategy, Roadmapping, User Stories, Wireframing, ICE Prioritization, A/B Testing

Technical: SQL, Python, APIs

AI & ML: LLM Integration, AI Evaluation Metrics, RAG

Tools: Figma, Excel, Mixpanel, Amplitude
